

# JavaMail extension

---

## Introduction

This connector is based on [JavaMail](#)<sup>1</sup> that provides a platform-independent and protocol-independent framework to build mail and messaging applications.

## Description

This connector supports the following protocols: SMTP, SMTPS.

The list of supported specific parameters is available in the javadocs:

- [JavaMail client javadocs](#)<sup>2</sup>

The mail and its properties (sender, recipient, subject, content, etc) have to be specified as an XML representation. Please refer to the [JavaMail client javadocs](#)<sup>3</sup> for more details.

Here is the list of dependencies of this connector:

- [JavaMail API 1.4](#)<sup>4</sup>
- [JavaBeans Activation Framework 1.1](#)<sup>5</sup>
